UNIX Pine Quick Tip

If you want an easy way to temporarily switch from Pine e-mail to the NERSP prompt, just type <control> key and z. This suspends Pine and allows you to work from the $ prompt until you type fg.

Warning: If you suspend your session for more than 30 minutes, you will only be able to read your INBOX and will have to quit and restart Pine in order to receive new mail or make any changes to your INBOX (eXpunging messages, changing their flags, etc.)

For more information about Pine, please see NERDC UNIX: An Introduction to NERSP, available from NERDC Information Services or http://www.cns.ufl.edu/info-services/handouts/unix101.

Your Comments are Welcome
