NERDC Dial-Up Statistics

Sessions per Userid

The charts and data here show usage figures for the NERDC dial-up servers. Total connect minutes during the 2000-2001 fiscal year were 242,179,970, a 22% increase over the prior year. The 17,464 average number of users per month had an average of 40.3 sessions per month, as compared to 35.3 the prior year. The average connect time was 28.6 minutes, as compared to 25.9 minutes the prior year.

For more information about what is considered a session, please see description next to the "Total Sessions" chart.

Unique Userids

This chart shows the number of unique userids dialing in each month. The number of unique userids per month shows peaks in October 2000 and March 2001, with a drop in June 2001. A userid which dials in multiple times during the month only counts as a single "unique userid."
Total Sessions

This chart shows the number of local and long-distance sessions per month. Sessions begin when a customer logs onto any dial-up server. E-mail composed in a PC-based system and mailed through NERSP or to a NERDC address does not count as a session until that person logs on and checks his or her e-mail.
Total Minutes

This represents the total number of minutes (per month) that users dialed in during the last fiscal year.
