Computer Challenge Gets New Courses .......................................................... 3
The Computer Challenge now offers more options! Along with the addition of many NETg courses, thanks to a new server, more options have been added to the existing tracks in the Computer Challenge Curricula.

If you're pursuing an MS Office or UF Systems Certificate, you now have more choices in the Windows, Word, and Electives categories.

- For the Windows category, in NETg, you can choose Windows 98 Fundamentals, Advanced, or Power User, or Windows 2000 Professional Fundamentals or Advanced. The Health Science Center is also offering an Introduction to Windows 2000 course.

- In the Word category, NETg's Word 2000 Expert has been added. The Center for Instructional Technology and Training's (CITT) two Word courses have been merged into one course.

- For the Electives category, NETg courses in MS Outlook 2000 have been added. You can choose from the Fundamentals, Proficient, and Expert courses.

If you're involved with the IT Provider Track, you should know that you now have more electives to choose from.

- CIRCA has expanded its TAP option to three modules. The available three are Client Services, Desktop Services, and HTML. If you choose this track, you'll be required to take the Client Services module, and choose one of the other two.

- CITT has expanded its course offerings under the Electives category for the IT Provider Track. These include a second Adobe Photoshop 6.0 class, a Digital Video workshop, courses in Macromedia's Dreamweaver 4.0 and Flash, and three sequential courses in WebCT.
