Incident Response Workshop .................................................................3
Incident Response Workshop

On June 21, Kathy Bergsma, UF Information Security Manager, presented an incident response workshop to UF IT workers to explain the proposed changes to the UF Incident Response Standard.

Over 50 attendees learned about the new incident severity classification, the new Florida privacy law, and service interruption notification procedures.

"I appreciate the patience of network and server managers as we implement new procedures to ensure compliance with the new privacy legislation," said Bergsma.

Over half of the attendees were either a network manager, a server manager, or both. About 97 percent of evaluation respondents said they found the event useful. Some said that the workshop helped clarify issues.

There was discussion about legal issues and the responsibility of network and server managers. It was suggested that UF lawyers present a legal perspective on privacy legislation. About 10 percent of respondents suggested this topic for future events.

The UF IT Security Incident Response Standard, live recording of the workshop, PowerPoint slides, and the workshop outline are available at http://infosec.ufl.edu/incident_workshop/.
